Hello!

Chapters 1-9 from "**AI-Assisted Data Science**" by **Immanuel Trummer** are ready for review and the latest **PDFs** are attached to this email. I've included more information about the book in the other attached document.

The due date for submitting the feedback is **April 6th, 2024**. If you see that you won't be able to provide feedback, let me know as soon as you can!

You need to read the book PDF and answer the questions in this Google form - <https://forms.gle/1gQ8xx8SquQ3kVn8>
I'd request you to share **actionable** feedback.

Just so you know, the *code for the chapters* can be found [here](#).

Kindly do not comment on typos, grammar/style errors, hand-drawn graphics, etc. The manuscript will be copy-edited, proofread, and typeset in the later stages of production.

By accessing the manuscript PDF you agree that you will not duplicate it or use the material to create a similar book nor discuss its contents with potential authors of similar books until this book is published or canceled.

We -- that is the publisher and the author -- appreciate your assistance in making this book as useful as possible to its readers.

Kind regards,
Kishor

Hi,

I've reviewed Chapters 1 and 2, and most of Chapter 3. I wanted to start coding, so I skipped to Chapter 5, with plans on returning to Chapters 3 and 4 later.

I have run into a major issue, there have been updates made to the OpenAI API. The code as provided by the author

does not run using the latest API version without modification.

I've included two examples below. Because of the additional time incurred troubleshooting and revising the author's code this review will take much longer than expected. I expect the code in later chapters, as the concepts become more complex, will take even more time to troubleshoot and revise.

Please let me know if I should continue. But based on my prior statements, I will not be able to complete my review by **April 6th, 2024**.

Please advise.

Thanks.
